The People Behind the Pixels

SIGGRAPH 2010

Mirror's Edge

Henrik Halen
Electronic Arts

Mirror's Edge

- Action Adventure
- A new take on first person movement
 - First person free running
 - No more gun-on-a-stick
- You play Faith
 - Free running information courier

Heightened senses

- Strong colors
- A stylized graphical simplicity
- Contrast in light and color
- Full screen effects and filters

Mirror's Edge

- Three cities
 - New York
 - Rio
 - Tokyo

500

Mirror's Edge

- New visual target
- Experimentation with color
- Fully operational beast

Mirror's Edge

- GI
- Color balance
- Roughness, whiteness
- Runner vision

Global Illumination

- Beast offline renderer
- Distributed
- Directional lightmaps

Mirror's Edge

- Some stats (the Shard):
 - ~200x3 Lightmaps (1024x1024 DXT1)
 - ~15000 meshes (12000 RNM + 4000 Vertex)
 - ~2000 lights

Mirror's Edge

- Heavily optimized for minimum memory footprint
- Possible to distribute to workstations
- Reduce network bandwidth
500 mb for largest levels

Mirror's Edge

- Rendering farm. Mostly on workstations
 - 50 cores per bake
 - Efficiency depends on many factors
 - Usually 15 times faster than local

Mirror's Edge

- Plan for GI renderer
 - Use renderer with small footprint
 - Or make sub levels self contained

Global Illumination

- Spend time tweaking your renderer
- Decide on algorithm
- Coherent believable impression
- Not a set of techniques or phenomena
- Fidelity is important!

White balance

- Realistic lighting
- Neutral materials
- Brain is a good
- Don't alter the end result

BURSFELD

Bug spray

For a bug-free City!

Disinfection guaranteed. No mess!

RITE BRITE

making the city shine

www.AG.RU

THE NEEDS, NEEDS IT!

DONOR TO THE NEW YORK PUBLIC LIBRARY

Make a difference!
vote Pope!

White Balance

- Use neutral materials
- Decide early
- Resist tweaking individual surfaces
- Trust your lighting
- Trust the human brain!

Macbeth Color Checker

Roughness and whiteness

- We want super white surfaces WITH PRESERVED DETAILS!
- Clean white surfaces look artificial
- Real life is imperfect

Curves

- Converted to three (RGB) curves with 16 linear segments for runtime
- Realtime in-editor preview
- Compared to cubes:
 - More GPU ALU
 - Less CPU and less data to GPU
 - Possibly more precision
 - No transformations across color channels

Roughness

- 16 segments go a long way
- Two 16 bit 16x1 RGBA textures sent to GPU
- Segment lookup with color as UV
- Interpolation between sets of curves on CPU
- Result always continuous
- Easy and fast to add curves
- Allows for smooth transitions and effects

Heightened senses

- Sound
- Body
- Runner vision
- Red guides player

Embody the Character

- Feel like you are part of the body
- Breathing
- Sound of air with speed
- Footsteps, hand impacts etc
- Camera movement

Interiors

- Stronger colors
- Less white
